Connect Ascendify to Any HR System to Avoid Double Data Entry

Ascendify Prebuilt Connectors from Modulus Data are the fastest and most cost-effective way to integrate Ascendify data with any HR system.

HR professionals want to avoid double data entry between systems so they can focus on more strategic things. Re-entering job and candidate data from an ATS to Ascendify is inefficient, vulnerable to manual errors, and with data integration—no longer necessary.

Modulus Data's Ascendify Prebuilt Connectors require no internal IT resources to be allocated to create or maintain an integration. These connectors also allow data to be shared to and from Ascendify in real-time. This streamlines HR processes in a way that was previously impossible.

Quick Data Integration Overview

What data gets integrated?

1. Job Requisition Data. As soon as you create a job requisition in your ATS, the new job is automatically pushed into Ascendify to speed the sourcing of quality candidates.

2. Candidate Data. Any new candidate sourced or profile updated in either Ascendify or your ATS will be automatically synched between the applications.

3. Application Statuses and Attributes. Any changes or status updates to a job application in either Ascendify or your ATS will be automatically synched between the applications.

How is Ascendify data integrated with other HR systems?

Generally, an API to API connection will be used as this allows for real-time data integration. As soon as something is entered or updated in one system, it shows up in the other.

Modulus Data's Ascendify Prebuilt Connectors run on an Integration Platform as a Service (iPaaS) solution, Modulus Connect. This cloud integration platform solves the problem inherent in all HR SaaS apps: the data is currently in disconnected silos in the cloud. With the Modulus Connect platform and prebuilt connectors, data is automatically shared between apps.

For new candidate data and profile updates, automatic data integration greatly enhances HR productivity and improves employee morale.

Who is Modulus Data and how do we handle integration?

Modulus Data is a recognized expert in data integration for HR applications. Connecting HR data is all we do.

Modulus Data creates, hosts, monitors, and maintains the data integration bridge between Ascendify and other HR apps, so your company does not have to dedicate internal IT resources to create or maintain the integration. Simply what SaaS did for software, iPaaS does for integration.

How fast is integration between Ascendify and other systems?

Total integration time is usually 4 weeks including testing in a trial environment, and a go-live launch, which is handled by Modulus Data.

When experts connect data, you have peace of mind.
